Databases :
Vertica, MySQL, MongoDB

Tools:
Eclipse, Intellij, Postman

Education

Institution	:	San Jose State University, CA
Period	:	2022-2024
Course	:	Master's in Software Engineering

Institution	:	Anurag Group of Institutions, HYD-IN [CGPA 3.8]
Period	:	2016 - 2020
Course	:	Bachelor's in Information Technology

Projects

Cascade

Client   : Apple
Description : Involved in developing intuitive web application using React JS.
               Created low latency services (API) using GSF(Java Framework).
               Contributed in transition Single Store database to improve performance.

EMMIA Affordability

Client   : Apple
Description : Contributed in developing console for boosting the internal operations
               Developed this using React JS and AG Grid for improved convenience
               Created low latency services (API) using GSF(Java Framework).

No Show Prediction

Client   : Apple
Description : Involved in extracting data from different sources and combine to data frames.
               Contributed in data cleaning and pre-processing.
               Developed a pipeline to push the results to AWS S3 bucket..

NPI

Client   : Apple
Description : Contributed in developing spark pipelines and kafka consumer and producers
               Create services using Java to access them from the database
